

Sprint 4 Report
Nurtivis AI
11/19-12/02

Stop doing:

We should stop waiting til the end for integrating all aspects of the app. We should have periodically integrated our work throughout the sprints.

We should stop being late at all. While we're arriving closer to the specified meeting time, we are still sometimes a few minutes late.

Continue doing:

We should continue to add to our automated test suite for the product.

We should to keep working hard. There is good progress on the project and we seem like we are on target to complete what we wanted in this release.

We should continue to have a positive attitude. A bad group attitude has negative effects on the other team members and a good one positively impacts the group.

We should continue the good work with documentation for the sprint and the project.

We should keep on reducing tardiness. Lateness has decreased and we should continue to come closer to the start time.

Start doing :

We need to start communicating well. It is essential to explain and elaborate on tasks being worked on so every team member is aware on each other's progress.

We need to start employing a layered design for the product. This will be benefit us when we need to integrate our tasks and will save time in the future.

We need to start being conversant in all aspects of the project. This will allow more code fluency and debugging will be significantly easier.

We should start explicitly saying when you cannot make a meeting. Multiple times people did not say that they had a schedule conflict resulting in last minute rescheduling.

We need to start putting strict rules back on Android Lint.

We need to remove any commented out test code before pushing to the Master branch.

Work completed:

1. As a developer of the app, I want to be able to connect Nutritionix to the Database.
2. As a developer of the app, I want to be able to connect GVision to the Nutritionix.
3. As a developer of the app, I want to be able to connect Database to the ListView.
4. As a user of the app, I want to be prompted when I enter bad input.
5. As a user of the app, I want to be able to enter my serving size.

Work not completed:

N/A! The app is done!

Work completion rate :

Total user stories completed: 5

Ideal working hours completed: 65

Total working days: 42

(Please see next page for Burnup Chart)

Final burnup/burndown chart:
