

Sprint 3 Report  
Nurtivis AI  
11/5-11/18

**Stop doing:**

We should stop being late at all. While we're arriving closer to the specified meeting time, we are still sometimes a few minutes late.

We should stop changing tasks/user stories midway through sprint unless absolutely necessary. User stories were modified during the sprint without a pressing reason.

**Continue doing:**

We should keep on reducing tardiness. Lateness has decreased and we should continue to come closer to the start time.

We should continue the positive attitude. A bad group attitude has negative effects on the other team members and a good one positively impacts the group.

We should keep utilizing continuous integration. Continuous integration allows other members to know more or less the current state of the project and alerts of any errors.

We should keep working hard. There is good progress on the project and we seem like we are on target to complete what we wanted in this release.

**Start doing:**

We should start explicitly saying when you cannot make a meeting. Multiple times people did not say that they had a schedule conflict resulting in last minute rescheduling.

We should start planning meetings further in advance, accounting for holidays. We didn't plan our meetings around holidays resulting in last minute rescheduling.

We should start adhering to style guide. To improve ability for team members to read code, we should follow the style guide.

**Work completed:**

2. As a user, I'd like the app to recognize the food so that I don't have to.
3. As a user, I'd like the app to be well designed so that I can enjoy my time using it.
4. As a user, I'd like to be able to sign out so that I can use different accounts.
5. As a developer, I'd like to be able to use continuous integration so that the build is checked often.
6. As a user, I'd like to see the nutrition content of my food.

**Work not completed:**

1. As a user, I'd like my data to be accessible in the future so I can track my nutrition over time.

**Work completion rate:**

Total user stories completed: 5

Ideal working hours completed: 55

Total working days: 23

## Final burnup chart:
