

## Working Prototype Known Problems Report

Product Name: Nutrivis.ai

December 2nd, 2018

List of All Functions Not Working Correctly:

1. When a picture is taken of a food/object that cannot be verified to be a food, the app brings you back to a screen that is empty. This screen should contain the previously scanned items, however this is a fault. The app cannot recover from this stage, unless it is killed locally and restarted.
2. The "Sign in with Google" functionality is not available yet as it gives an error code when trying to sign in with Google.
3. Scanned date is wrong in ListUI
4. Clicking back from ListUI does nothing
