

## Working Prototype Known Problems Report

Product Name: Nutrivis.ai

December 2nd, 2018

List of All Functions Not Working Correctly:

1. When a picture is taken of a food/object that cannot be verified to be a food, the app brings you back to a screen that is empty. This screen should contain the previously scanned items, however this is a fault. The app cannot recover from this stage, unless it is killed locally and restarted.
2. Scanned date is wrong in ListUI
3. Clicking back from ListUI does nothing
